

## Bluetooth Manual

### 1. Install and connect the App

Scan the QR code below or search the APP "QOMOANDER" to download the APP for your Phone.

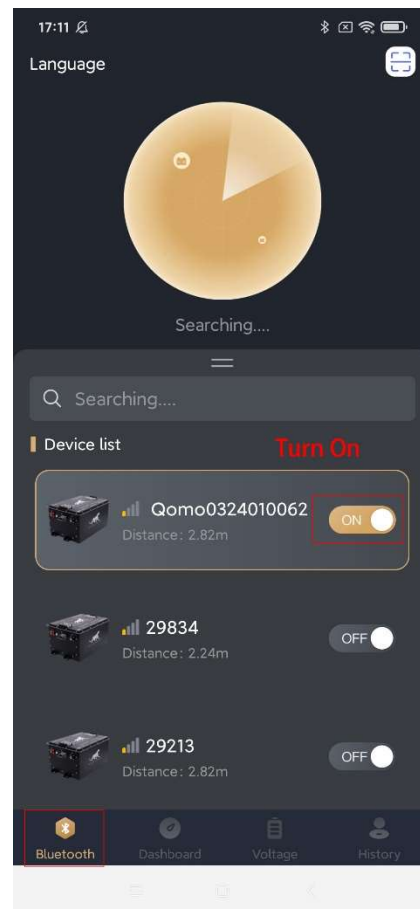

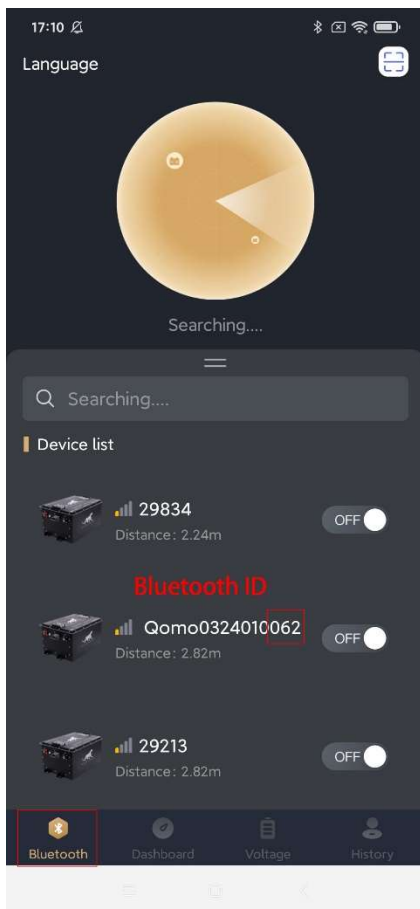

Android

iOS

After installed the "QOMOANDER" APP, open it. It will search nearby connectable batteries and display its Bluetooth ID. Turn on your Battery' Bluetooth ID.

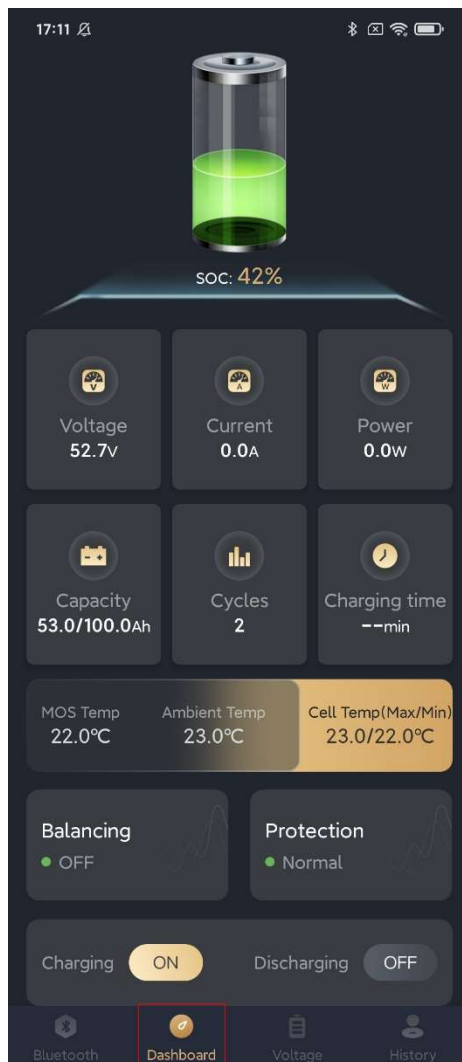

For the Bluetooth ID, you can find it on the label attached to your battery or your Gauge.

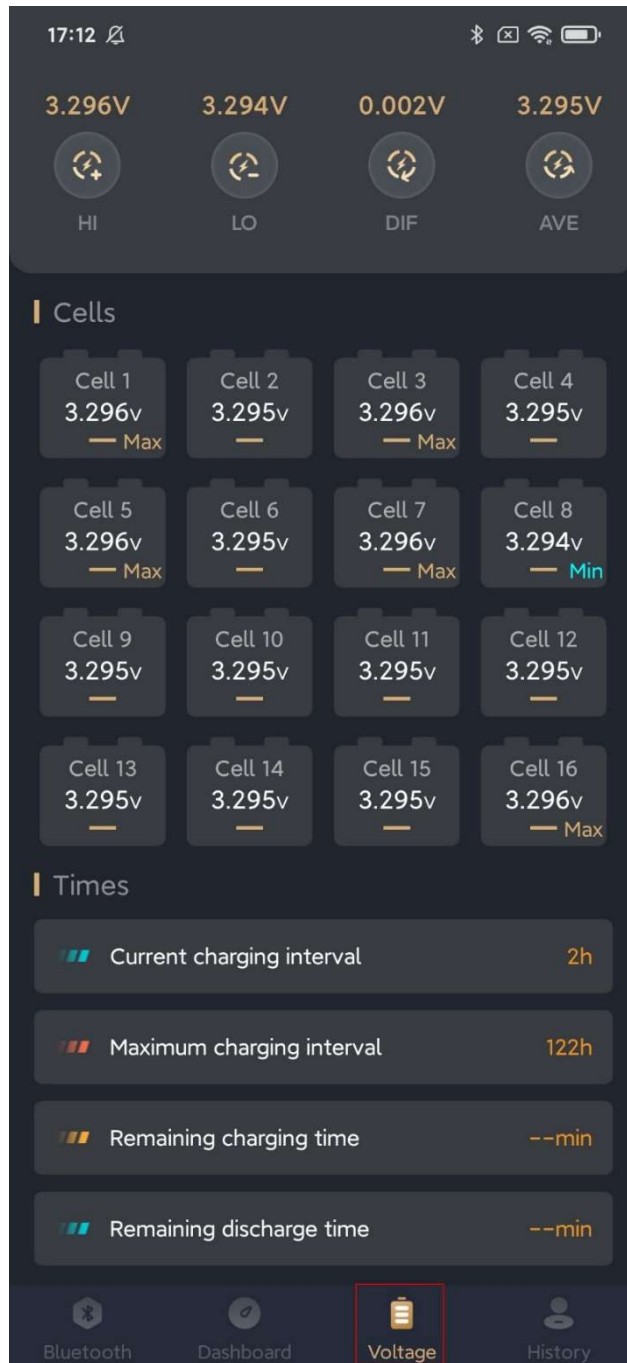

## 2. Dashboard

In dashboard page, you can monitor the battery' real-time SOC, SOH, Voltage, Current, Power, Capacity, Cycles, Charging time, MOS Temperature, Ambient Temperature, Cell Temperature, Balancing, Protection.

### 3. Voltage

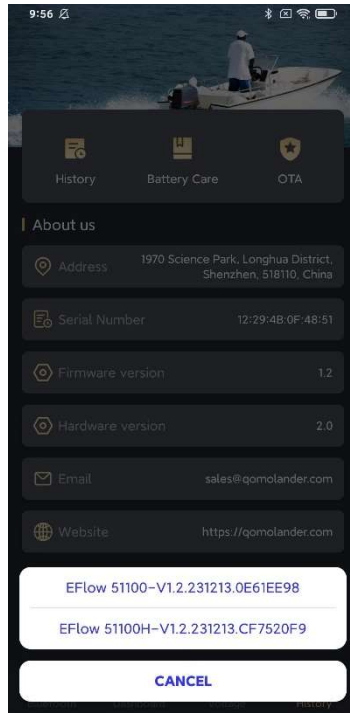

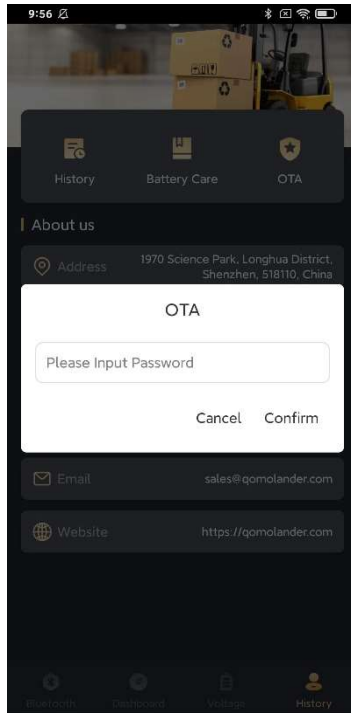

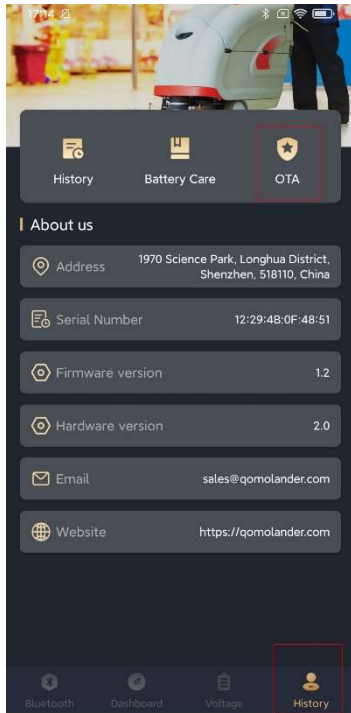

In Voltage page, you can monitor the detailed voltage of each battery Cell. The highest voltage, the lowest Voltage, Voltage Difference, Average Voltage and Voltage of each battery cell.

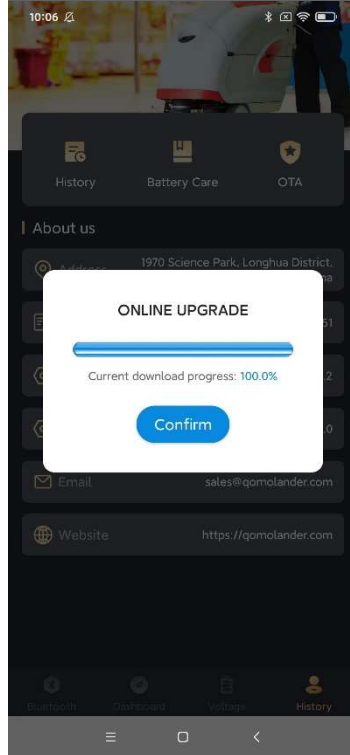

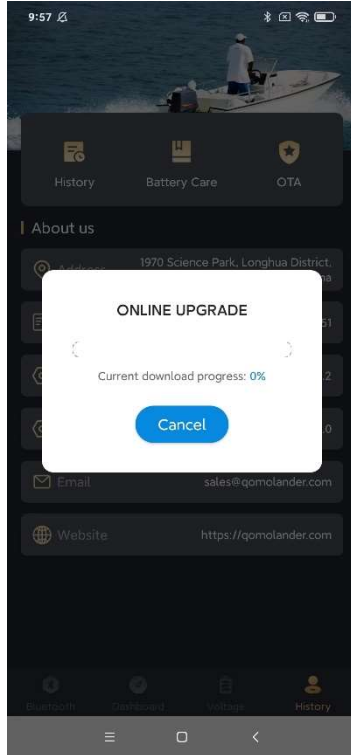

### 4. History & OTA Programing

In History page, you can check the battery' firmware and hardware version. And you can also upgrade the program of your battery.

Click OTA and input PIN **“qomolanderprogram”**, then you can find all the available online program. Please choose the right program of the models you have. (You can find the model number printed on the battery). Then start upgrading.

**Model Number**

The upgrade process takes few minutes, so please be patient. If the Bluetooth connection is disconnected midway, causing the upgrade to fail, please follow the above steps and try again.
